ITEC 204 – Data Structures and Algorithms

Name: Alpante Jhaycee D	Date: 9/24/2026
Section: BSIT_2A	Instructor: Maxyne Nuela Ignacio

- I. **Objective:** Write a short explanation of what your program is designed to do. (Minimum of 3 sentences)

Answer: The program is designed to manage incident tickets created by automation bots. It allows the user to add, display, search, remove, and count active incident tickets. The program uses a Python list as a linear data structure to store and manage the incident records.

- II. **Program Operations:** Briefly explain how your program performs each operation. (Insert Specific Code Line and Your Explanation)

Add Incident:

```
tickets.append({"id": ticket_id, "bot": ticket_bot, "description": ticket_description})
```

This line adds a new ticket to the list. It saves the ticket ID, bot, and description.

Display Incidents: `for ticket in tickets: print(f'{ticket["id"]}, {ticket["bot"]}, {ticket["description"]}')'`

This loop shows all the tickets in the list. It shows the ID, bot, and description.

College of Computer Studies

Search Incident:

```
if ticket["id"] == ticket_id:
```

This checks if the ID entered by the user matches a ticket in the list. If it matches, the ticket information is shown.

Remove Resolved Incident: `tickets.remove(ticket)`

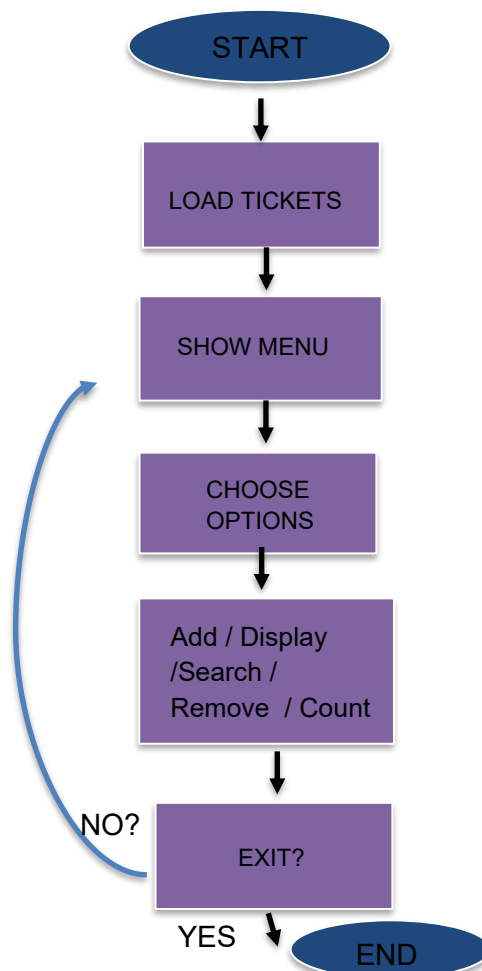

This line removes a ticket from the list. It is used when a ticket is already resolved.

Count Active Incidents:

```
print(f'\nTotal number of tickets: {len(tickets)}')
```

The len() counts the tickets in the list. It shows the total number of active tickets.

III. **Flowchart:** Create a flowchart showing the overall process and logic of your program.

IV. **Conclusion:** Briefly explain what you learned from the activity and how the linear data structure was applied.

In this activity, I learned how to make a simple ticket management program in Python. I learned how to add, show, search, remove, and count tickets. I used a list to store the ticket information. This helped me understand how a list can be used in a simple program.
